SUMMARY

Second-year Computer Science student specializing in Artificial Intelligence & Data Science. Hands-on experience building and evaluating machine learning models, designing data pipelines, performing exploratory data analysis, and developing applications with data components. Strong foundation in Python, web development, and core CS concepts.

EDUCATION

B.Sc. (Hons) Computer Science & Artificial Intelligence Expected 2029
Sunway College Kathmandu (Birmingham City University)
Relevant Coursework: Machine Learning foundations, Data Structures & Algorithms, DBMS, OOP, Computer Networks, Operating Systems, Discrete Math.
Intermediate (+2) Science – Mathematics & Computer 2023 – 2025
National Infotech College | NEB

TECHNICAL SKILLS

Languages & Core: Python (pandas, NumPy, scikit-learn), SQL, JavaScript, HTML/CSS, Git
Data Science & ML: EDA, Feature Engineering, Model Evaluation, Classification/Regression, Basic Neural Nets, Matplotlib, Seaborn
Tools & Platforms: Colab, Docker, Linux, PostgreSQL, MongoDB, SQLite, Streamlit/Flask for dashboards & APIs
Data Engineering: Web Scraping (BeautifulSoup/requests), REST APIs, Data Cleaning & Preprocessing, Basic ETL pipelines

PROJECTS

Hospital Management System with Data Analytics Module Python • SQL • pandas
• Built full-stack hospital system (patient records, appointments, billing) with a data analytics layer using pandas for occupancy trends and no-show insights.
• Used PostgreSQL/SQLite for storage and structured queries; exposed key metrics through a clean administrative interface.

End-to-End Web Scraping + Analysis Pipeline Python • BeautifulSoup • pandas
• Developed automated scrapers that collected and cleaned several thousand structured records from public sources.
• Performed EDA, handled missing values/outliers, and created visualizations (distributions, correlations, time trends). Pipeline designed for easy re-runs.

Machine Learning Experiments & CS50 AI Projects Python • scikit-learn • TensorFlow basics
• Trained and evaluated classification/regression models (logistic regression, trees, random forests, basic neural nets) on public datasets with proper train/val/test splits and cross-validation.
• Completed Harvard CS50 AI & CS50 Python; implemented search algorithms, knowledge representation, and ML projects with documented experiments.

Nepal's culture based AI powered Dating Platform NextJS • TailwindCSS • PostgreSQL • Django
• Led frontend development for a full-stack dating platform built with a team of 4, implementing responsive UI, user authentication flows, and real-time features using NextJS and Tailwind CSS.
• Designed and trained machine learning models on user preference and cultural data to power an intelligent matching system, improving recommendation relevance through feature engineering and model evaluation.
• Integrated the ML matching service with the Django backend and PostgreSQL database, enabling personalized match suggestions based on Nepal-specific cultural preferences and user behavior.

EXPERIENCE

Freelance Developer & Data Projects | Client Gigs & Personal 2025 – Present
• Delivered client websites and small applications that included data collection forms and basic analytics components.
• Independently designed, trained, and iterated on AI/ML models for exploratory projects with focus on reproducibility and evaluation rigor.

Tutor – Science, Mathematics & Computer Science 2023 – 2024
• Tutored students in mathematics, science, and introductory programming; strengthened ability to explain complex technical concepts clearly — valuable for data science collaboration.

CERTIFICATIONS & COURSES

Harvard CS50 Artificial Intelligence with Python (2026) • Harvard CS50 Python Programming (2026) • Harvard CS50 Computer Science (2026)
freeCodeCamp MERN stack Development (2026) • IBM SkillsBuild Enterprise Design Thinking Practitioner (2026) • Yantra X Global Webinar – Robotics & Automation (2026)
